CAREER OBJECTIVE

Constantly seeking out new challenges and opportunities to expand my knowledge, and I am excited to bring my enthusiasm and expertise to a new role in software development.

WORK EXPERIENCE

Full-Stack Developer

Projects

October 2022 - Present / Remote

- Car Showcase App - A state of the art modern application built for car enthusiasts. The entire application is fully mobile responsive and implements advanced search and filter functionality. It is powered by Rapid API, displaying car models and details. The frontend uses **NEXT.js**, **Typescript**, and **Tailwind CSS**.
- ChatGPT Messenger App - A chatbot that uses natural language processing to generate responses user input! It is powered by **OpenAI API**, which uses a deep learning model to generate human-like conversations. The frontend uses **HTML**, **CSS** and **Javascript**. The server is rendered on Render Web Services and uses **Express** and **OpenAI**.
- Face Recognition App -Allows the user to register/login and detect faces in images! Responsive CSS and vector graphics implemented to dynamically draw on image URLs and store results on a database for each user. Developed using **Clarifai API**, **React JS**, **Redux**, **Express**, **PostgreSQL**. The server is rendered on Render Web Services and uses **Express** and **OpenAI**.
- Youtube Clone - A modern YouTube Clone application created using **React Javascript** with **Material UI 5** for styling. Allows users to search through and view youtube videos using **RAPID API** Youtube Search.
- Recipe App (MERN) - When logged in the user can create, read, update and delete their favorite recipes! Built with **MongoDB**, **Express**, **React JS**. and **Node**. Ensured security with **JSON Web Tokens** and optimized for mobile and desktop users.
